KEY POINTS

Policy

InfusionPoints' Policy Framework establishes management direction, procedures, and requirements to ensure that appropriate protection for information assets are defined and align with NIST Standards.

Compliance

InfusionPoints provides capabilities in security awareness training, information technology security training, computer-based training classes, IT oversight, system registration and categorization, and continuous monitoring planning. InfusionPoints provides FISMA support, including reporting and tracking compliance issues, POA&M, and corrective action planning.

Privacy

InfusionPoints can assist in creating agency programs for conducting efficient and effective Privacy Impact Assessments (PIAs), Privacy Threshold Analyses (PTAs), System of Record Notices (SORNs), conducting PIAs, PTAs, and SORNs on behalf of the agencies, conducting comprehensive FISMA compliance reviews and mitigation, and developing Computer Matching Agreement (CMA) processes.

Risk Management

InfusionPoints has extensive experience in building successful risk management programs and developing concise, actionable risk assessments for clients. We have reviewed, designed, built, and executed security risk management programs for numerous clients that have proven to help identify common security controls, manage the impact of significant changes on applicable security controls, and assess security impact analyses submitted by operations units. Our team maintains experts in each realm of risk management that will be used to reduce risk to data, systems, and mission.

Security Assessments

InfusionPoints has leveraged industry-recognized security assessment capabilities to implement the latest trends in data protection, technology advancements, and legislative changes. We are able to tailor assessments to meet security compliance requirements with extensive experience with full, annual, and delta security assessment and authorizations processes including support for IV&V and POA&Ms development/review.

Threat Management

InfusionPoints considers Threat Management to be of critical importance in protecting our clients' information systems and cyber infrastructure. Today's cyber threats are increasingly targeting corporations and government agencies to conduct industrial espionage, undermine business and financial operations, and sabotage infrastructure. A perimeter defense alone is not sufficient for protection – adversaries are too many, too fast, and too sophisticated.

Identity, Credential & Access Management (ICAM)

Our consultants apply our proven ICAM frameworks and expertise to simplify identity, credential and access infrastructures to increase security, privacy, compliancy, efficiencies, and reduce costs. ICAM programs require seasoned professionals to plan, manage, and build the ICAM infrastructures that support the digital identity lifecycle.

Security Consulting

InfusionPoints provides a full suite of consulting practices to infuse security into customer cybersecurity business needs through solution design, development, deployment and O&M.

Why InfusionPoints

InfusionPoints consists of a carefully selected and highly qualified cybersecurity professionals that apply holistic, integrated cybersecurity methodologies. Combining our proven framework with critical thinking and deep analytics will solve your most pressing IT cybersecurity challenges. Our consultants demonstrate comprehensive understanding of cybersecurity core knowledge and stakeholder engagement. InfusionPoints commands industry-proven methods for all of your cybersecurity needs.
